PRO GUARDIAN
Professional Worldwide service
from a UK company

Every company has a duty of care to their employees to ensure that they are safe in the workplace whether this is at your usual place of work or on a remote site.

The Protrack Group have developed the Pro-Guardian lone worker system to work in conjunction with the full range of Protrack Products. It works using advanced GPS technology on a smart phone or tablet and/or a Pro-Guardian lone worker POD.

About the POD

The POD is an IP rated permanent, or deployable alarm box comprising a long life battery, toughened shackle for securing to a post or rails, audio visual alarm, key switch for activation and remote receiver. The POD plus and premium version also comes with a GPS tracker and optional USB charging point.

The POD has a remote range of approx. 100 meters but should always be tested prior to full deployment.

Pro-Guardian

The lone worker activates a remote fob in the event of an incident which sends a signal to the deployable POD which activates an audio / visual alarm that brings attention to the fact that there is a possible man down situation at that location.

Pro-Guardian Plus

The plus version has a GPS tracker installed so so when the remote alarm is activated a message is sent to the servers and in turn notify other members of your team by SMS and Email as well as a visual alert on your back office software.

A protocol will then appear which guides you through the process of what to do in the event of an incident.

All of this information is recorded and a full report of each incident can be ran.

Pro-Guardian Premium

As well as all of the features of the PLUS version, Protrack have also built the Pro-Guardian App. This can be set by the back office or lone worker. It will simply count down the minutes until the next check in time is required and then alert the lone worker that they need to "check in". If this does not happen the alarm will sound and the back office, SMS and email notifications are sent as well as other App users in your organisation.

The App can be started by the user manually, pre defined times for site attendance or by geofencing the area where the worker will be operating, the user simply enters the area and the app starts automatically. When they leave it deactivates.
